Full Stack Engineer shipping scalable production systems and measurable AI features

EXPERIENCE

Lead Engineer — Research Initiative (Full-Time)

Feb 2023 – Dec 2025

Saint Louis University — \$2M Initiative

St. Louis, MO

- Converted research prototype into deployed production platform serving real users across web and mobile.
- Led development sustaining 500 concurrent users and 1,000 sessions during peak load events.
- Managed 15 engineers across 5 teams with biweekly releases and structured sprint execution.
- Architected full-stack system including authentication, database structure, APIs, and deployment pipeline.
- Developed LLM classification pipeline processing all user content with ~80% accuracy and throttling (5 requests/user).
- Cut load time 50% through caching, batching, lazy loading, and pagination strategies.
- Sustained 100% uptime during reporting period; CI/CD runs ~5 minutes with 100 automated tests gating deploys.

Software Engineer — Research Collaboration (Part-Time)

May 2025 – Oct 2025

University of Missouri — St. Louis

St. Louis, MO

- Engineered production APIs using Node.js and Express supporting 200+ users.
- Indexed and cleaned 1,000+ records reducing semantic search latency from 10ms to 5ms.
- Integrated Google Maps routing supporting navigation across Missouri locations and addresses.

Software Engineer (Full-Time)

Jan 2021 – Jul 2022

Eezee Business Machines

Mumbai, India

- Developed dashboards and APIs supporting real-time IoT device platforms.
- Defined API contracts used across production web and mobile applications.
- Sustained reliability via monitoring, alerting, and automated CI pipelines.

PROJECTS

Where's Religion — React Native, Next.js, Firebase, AI

2023 – 2025

- Production platform serving 2,000+ users across iOS/Android/web with shared data models and synchronization logic.
- Deployed Firebase authentication and designed cross-platform architecture enabling consistent user sessions across clients.

Missouri Crossroads — Next.js, AWS, APIs (Collaborative Research Platform)

2025

- Built independent full-stack platform designed for future integration with university research ecosystems and collaborations.
- Architected AWS-backed stack (Auth, S3, APIs, Maps) and curated dataset of 1,600 entries (700 museums, 300 artifacts, 600 monuments).

International Information Assistant — Next.js, TypeScript, AI

2024

- Developed AI travel assistant handling transit/visa queries for 200+ countries with 5–10ms response time.
- Implemented single-call inference workflow using OpenAI API to generate structured decisions and explanations.

Playlist Tracker — Next.js, TypeScript, PWA, APIs

2024

- Developed cross-platform PWA enabling playlist transfer across major music platforms with client-side processing.
- Processed playlists up to 60 tracks using matching plus fallback recommendation logic (~3 min transfers).

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Java, SQL

Frameworks: React, Next.js, React Native, Node.js, Express

AI: LLM integration, prompt engineering, classification pipelines

Cloud/DevOps: AWS, Firebase, Docker, CI/CD, GitHub Actions, Jenkins

Testing/APIs: REST, OpenAPI, GraphQL, Jest, Playwright

EDUCATION

Saint Louis University

M.Sc. Computer Science

Aug 2022 – May 2024

St. Louis, MO
